VOLUME I

ECONOMIC PROFILE

Volume I presents and analyzes Montana economic data by county including income and poverty data from the U.S. Census Bureau, employment, earnings and income data from the U.S. Bureau of Economic Analysis (BEA), and labor force statistics from the Montana Department of Labor and Industry (MDOLI) and the U.S. Bureau of Labor Statistics (BLS).

In 2005, Montana's per capita personal income (PCPI) was \$28,906, ranked 42nd in the United States and was 83% of the national average of \$34,495. Per capita personal income is total income divided by total population. The 2005 PCPI reflected an increase of 7.6% from 2004, compared to the national increase of 4.2%. Since 2000, Montana's PCPI has increased an average of 4.7% annually. Montana's PCPI has ranked below 40th since 1984.

ECONOMIC STRUCTURE

To gauge overall economic progress in the Montana economy, one measure is the value of goods and services produced by Montana businesses (Gross State Product). Gross State Product (GSP) is determined by summing up the dollar value of goods and services produced and sold by businesses in the state. In general, GSP will increase over time because it reflects both prices and quantities of products sold. As the general price level rises over time, GSP may increase even if the quantity of products being sold has not changed. A better indicator of changes over time in the state is Real (or constant dollar) Gross State product. Real GSP has had the effects of price changes removed and gives a clearer idea of what is happening to production or sales levels within the state. The chart "Real Montana Gross State Product" on the next page illustrates the relationship of real GSP in Montana from 1997 through 2005.

Real Montana Gross State Product

Data is presented in chained 2000 dollars so that it is comparable across time periods. This removes the effect of inflation. Periodically, government agencies like the BEA will update the base year used.

In general, the state has increased its production of goods and services on an annual basis reflecting an increase in the production of goods and services throughout the state. Since 1997, Montana's real GSP has increased an average of 3.0% per year. The increases in 2003 (4.7%) and 2005 (5.2%) were the highest during the past 9 years.

The year-to-year variability is more apparent in the chart on the following page, which shows effectively the change in quantities produced from one year to the next. This chart (data from BEA) reflects the decline in the state's economy from 1998 through 1999 and the gradual improvement since then. In fact, the increase in GSP for Montana during the past four years has outstripped the national growth rate.

**Percent Change in Montana Real Gross State Product
compared to US
(chained 2000 dollars)**

Although the overall improvement in the Montana economy is reflected in Gross State Product, these numbers provide no information on whether the trend is consistent across all industries within the state. Employment data by industry can be used to further analyze what is occurring in the Montana economy. Initially, businesses are divided into sectors by NAICS codes and then the employment trends in each sector are calculated as a share of the total employment within the state¹. An examination of changes in the share of employment provides information on which sectors of the state's economy are increasing or declining in relative importance. The chart on the next page (data from BEA) provides a basis for comparing changes in sectors from 2001 to 2005. The change from SIC to NAICS categorization does not allow for comparison of data prior to 2001 with more recent data.

¹ In 2002, the BEA changed from the SIC system (standard industrial classification) to the NAICS (North American Industry Classification System) for data collection.

Share of Statewide Employment by Sector 2001 to 2005

Employment share shifts between 2001 and 2005 indicate the largest changes in construction, professional and technical services, arts, entertainment and recreation, and health care. Declining employment share sectors include farming, utilities, retail trade and transportation and warehousing. The industry share indicates the relative importance of a sector in providing jobs within Montana's economy but not necessarily the contribution to GSP.

Montana Employment Growth by Sector 2001 to 2005

FF = forestry and fishery **TW** = transportation and warehousing **FI** = finance and insurance
AW = administrative and waste services **AER** = arts, entertainment and recreation
AF = accommodation and food services **RE** = Real Estate, Rental and Leasing
WT = Wholesale Trade

Examining growth rates by sector provides more information on expansion or contraction of industries within the state. Mining, real estate, and construction showed the strongest growth during 2003-2004 and continued to improve during 2004-2005. Professional and technical services expanded as did administrative positions. Farming, forestry and fisheries and government declined from 2004 to 2005. Management positions which fell significantly in the 2003-04 period rebounded during 2004-2005.

To better understand the changes in Montana's economy between 2001 and 2005; it is useful to compare the changes to the trend nationally for the same industries. This chart displays the rate of growth of the different sectors nationwide and the rate of growth of the same sectors in Montana (data from BEA).

**Montana vs. United States
Growth by Industry Sector
2001-2005**

FF = forestry and fishery **TW** = transportation and warehousing **FI** = finance and insurance
AW = administrative and waste services **AER** = arts, entertainment and recreation
AF = accommodation and food services

Construction, mining, and arts, entertainment and recreation as well as professional and technical services have fared better in Montana than in the US as a whole. Finance and insurance and educational services have shown strength at the state level while management and transportation and warehousing have lagged the national growth.

LABOR FORCE AND EMPLOYMENT

Labor force statistics are collected by the Montana Department of Labor and Industry, under rules established by the U.S. Bureau of Labor Statistics, and represent the civilian labor force, including self-employed persons and paid family workers. The primary source for these statistics is a monthly survey of 950 households throughout Montana.

The labor force is defined as the number of persons 16 years and older, either employed or unemployed, excluding members of the armed forces. Employment is defined as those persons who work for pay or profit during the week. Also included as employed are persons who were not working but had some job attachment and were not looking for work (such persons may be temporarily absent from a job due to illness, weather, vacation, labor dispute, whether or not they were being paid during their time off). The unemployment rate is defined as the number of unemployed persons

expressed as a percentage of the labor force. These labor force statistics represent the most recent data as of the date of this report. Data is periodically re-estimated.

Below is a summary of labor force and employment statistics for the 6 largest counties in Montana:

	Average Annual Labor Force				Change 2002 - 2005	
	2002	2003	2004	2005	#	%
Cascade	36,217	36,527	39,209	39,593	3,376	9.3%
Flathead	40,321	41,632	41,868	43,234	2,913	7.2%

Montana	463,516	474,910	483,043	495,414	31,898	6.9%

	Average Annual Employment				Change 2002 - 2005	
	2002	2003	2004	2005	#	%
Cascade	35,315	34,853	37,566	37,988	2,673	7.6%
Flathead	38,098	38,960	39,625	41,317	3,219	8.4%
Gallatin	43,762	44,725	43,270	45,704	1,942	4.4%
Lewis & Clark	27,003	27,279	29,940	30,349	3,346	12.4%
Missoula	50,894	54,480	55,229	56,542	5,648	11.1%
Yellowstone	65,647	69,436	74,473	77,123	11,476	17.5%
Montana	442,000	442,144	461,746	475,641	33,641	7.6%

	Average Annual Unemployment Rate				Change 2002 - 2005	
	2002	2003	2004	2005	#	%
Cascade	4.3%	4.6%	4.2%	4.1%	-0.2	-4.7%
Flathead	5.6%	6.4%	5.4%	4.4%	-1.2	-21.4%
Gallatin	2.7%	2.8%	3.3%	2.8%	0.1	3.7%
Lewis & Clark	4.3%	3.9%	3.9%	3.7%	-0.6	-14.0%
Missoula	3.9%	3.9%	4.0%	3.7%	-0.2	-5.1%
Yellowstone	3.7%	3.6%	3.5%	3.2%	-0.5	-13.5%
Montana	4.6%	4.7%	4.4%	4.0%	-0.6	-13.0%

Statewide, the average annual labor force increased by 6.9% and the average annual employment showed a 7.6% increase from 2002 to 2005, while the average annual unemployment rate decreased .6 percentage points or 13%. Five out of six counties showed a decrease in unemployment rates, while Gallatin County showed an increase of 3.7%.

Historical detail by county of labor force, employment, and the unemployment rate are on the following three pages. The sum of individual counties may not agree to the Montana total due to rounding.

Over the last 10 years (1995 to 2005), Montana's labor force has increased 13.9%, while average annual employment has increased 16.2%. During the same time period, the unemployment rate dropped 1.9 percentage points or a 24.5% drop in the unemployment rate.

Some counties within Montana have enjoyed solid employment growth while other areas have continually languished. Chouteau, Daniels, Gallatin, McCone and Powder River counties have maintained an average unemployment rate of 4.0% or below since 1995. Big Horn, Glacier, and Lincoln counties have experienced an average unemployment rate of 8.0% or higher since 1995. Since 1995, the following counties have experienced at least a 3.0 percentage point drop in their unemployment rate: Rosebud, Big Horn, Blaine, Lincoln, Mineral, Glacier and Sanders, while Liberty and Carter experienced an almost 2.0 percentage point increase in unemployment rate.

EMPLOYMENT

Employment by industry is a useful categorization to see where and why job growth and contraction have occurred. The U.S. Bureau of Economic Analysis publishes employment by industry based on the NAICS. The source of the BEA employment data is the state unemployment insurance system, and represents both full-time and part-time employment. Full-time and part-time jobs are counted at equal weight, thus the BEA statistics by industry will exceed average annual employment produced by the Montana Department of Labor and Industry. Employees, sole proprietors, and partners are included; unpaid family workers and volunteers are excluded.

Between 2001 and 2005, four industries recorded significant decline in numbers of workers employed. Farm employment declined 5%, manufacturing fell 13%, utilities declined 4 % and information fell 12%. Sectors showing marked improvement were construction (10%), real estate (25%), educational services (15%) health care (11%), and administration and waste services (11%). Table I.4, following, shows employment numbers for the various industry groupings for 2001 through 2005. The change from SIC to NAICS makes the data from years prior to 2001 incompatible with the most recent data.

Table I.4
Montana Employment by Industry

	2001	2002	2003	2004	2005
Farm	32,047	32,535	31,627	31,604	31,256

Class of Worker

Table I.5 on the following page shows Montana's class of worker. The total employed persons over 16 of 425,977 were based on the count as of the 2000 Census; the Montana Department of Labor and Industry employment of 452,124 represents average annual employment. Since the 1990 Census, total workers have increased 21%; the percentage that are private salary and wage workers (65.7% of total in 1990) has increased since 1990 while the percentage that are government (20.1% of total in 1990) and self-employed workers (13.2% of total) has decreased since 1990.

Civilian government workers are included in the "government" column; those in the armed forces are excluded from the table.

Occupation

The occupation of Montana's workers from Census 2000 is in Table I.6 on the following page. The majority of Montana's workers were employed in either management or sales and office positions. While Census 1990 figures are not directly comparable since the occupation categories have changed somewhat, there clearly has been growth in the management, service, and sales and office categories (34% combined increase) and decline in the farming, fishing and forestry category (68% decline) since 1990.

Method of Transportation

Table I.7 shows the method of transportation used by Montana's workers to get to their job. Almost three-quarters of workers drove alone to their job. While the percentage of workers utilizing public transportation was below 1%, most counties do not have extensive public transportation systems. Not surprisingly, Missoula (1.3%) and Yellowstone (1.1%) counties had the highest percentages. The overall percentage of carpoolers has not changed since 1990, while the percentage of those driving alone has increased slightly. There was a slight drop in the combined percentage of workers walking or working at home since 1990 (these categories were combined in the 1990 Census).

Educational Attainment

According to the MDOLI, the majority of Montana's jobs require a 2-year degree or less. Montana has a highly educated population. Just over 87% of all Montanans are high school graduates, 55.9% have at least some college, and 30.2% have an associate degree or higher. Given that 24.4% of Montanans have a bachelor degree or higher, this demonstrates that many residents are "underemployed"². The percentage of the population with a bachelor's degree or higher ranges from a high of 41% in Gallatin County to a low of 12.3% in Mineral County. Table I.8 details educational attainment by County from Census 2000. The underemployment concept is further magnified by the lack of higher-paying jobs and the predominance of lower-paying jobs.

Using Montana's Job Service clients in Yellowstone County in 2000, it was estimated that 25%³ of those individuals seeking better employment in Yellowstone County were over-qualified ("underemployed") for their last job. While this percentage cannot be directly applied to other counties in the state, it would be reasonable to assume that this "underemployment" exists in other counties in Montana given its residents' education and job status.

² Over-qualified/underemployed refers to job requirements compared to educational attainment.

³ This percentage could be higher if work-related skills and experience were also factored into the analysis.

PERSONAL INCOME

The BEA also provides earnings and income data. The BEA data was converted from nominal dollars to real dollars, to remove the effect of inflation.

Table I.9 shows earnings by industry, per worker. The highest paying sector in 2005, utilities, had the second highest earnings growth rate of 13.7% from 2001 to 2005. However, this sector only accounted for 1.1 % of total employment in 2005 (Table I.4). The lowest paying sector, accommodation and food services, had a 3% increase in earnings from 2001 to 2005 and a 2.5% increase in employment (Table I.4) during the same period.

In order of importance, the next four highest paying industries are: mining; management; finance and insurance; and manufacturing.

Overall, Montana's average (for all industries) real earnings per worker increased 5.9% from 2001 to 2005.

Real per capita income for Montana is compared to the United States in Table I.10. Real per capita income includes unearned income such as dividends, interest and rents. While unearned income has grown 18% from 1990 to 2005 in Montana, earnings (wages and other earned income) have grown 56% over the same period. Social security contributions have risen 55% over the same time period while transfer payments increased 48%.

Overall, Montana's real per capital personal income increased 25% from 1990 to 2005, compared to a national increase of 18%.

To remove the effect of inflation, nominal dollars were converted into real 2005 dollars using the CPI-U (consumer price index for all urban consumers)

Using BEA data, a comparison of annual average real wages per job for Montana and the United States is presented in the chart below:

The chart shows the weighted average real (adjusted for inflation) wage rate for industries in Montana versus the United States. It clearly illustrates the disparity between Montana's average wages and U.S. total average wages. In 1970, Montana wages were 85 percent of US wages and then rose to 90 percent of US wages by 1979. Beginning in 1984, the disparity between Montana and the US started to expand. By 2001, Montana wages had declined to only 70 percent of US wages and by 2005 had risen to 72 percent of US wages. While U.S. wages increased only 1.76 percent from 2003 to 2005, Montana's wages rose 2.38 percent during the same time period.

The Census Bureau provides data on median family income by county and family income distribution by income range. Median family income is the income amount where one-half of families have incomes above the median, and one-half of families have incomes below the median. Per capita income is total income divided by total population. A family is defined as a householder and one or more persons living in the same household who are related to the householder by birth, marriage, or adoption.

Median household income is the income amount where one-half of households have higher incomes, and one-half of households have lower incomes. A household is defined as all persons living together in a housing unit (not necessarily related).

Nine counties had median family incomes at or above the Montana average of \$40,487: Flathead (\$40,702), Gallatin (\$46,639), Jefferson (\$48,912), Lewis and Clark (\$46,766), Missoula (\$44,865), Park (\$40,561), Rosebud (\$41,631), Stillwater (\$45,238), and Yellowstone (\$45,277). Flathead, Gallatin, Missoula, and Yellowstone counties are large counties; Jefferson and Lewis & Clark counties have residents employed in higher paying government jobs; and Stillwater County has residents employed in higher paying mining jobs.

The counties with the four lowest median family incomes were Blaine (\$30,616), Garfield (\$31,111), Lincoln (\$31,784), and Sheridan (\$31,340).

The detail by county of income distribution, median family income, and median household income is in Table I.11 on the next page.

The Census Bureau also provides income levels for homeowner households and renter households. Households are defined as all persons living in a housing unit (not necessarily related). The table below shows that for income categories of \$34,999 or less, there are a higher percentage of renters than homeowners. For income categories of \$35,000 or more, there are a higher percentage of homeowners than renters. Few renter households fall into the income level of \$150,000 or more.

INCOME LEVELS FOR HOMEOWNERS AND RENTERS IN MONTANA							
2000 CENSUS							
Household Income		% of Total Homeowners		% of Total Renters		% of Total Total Households	
Less Than	\$5,000	6,280	3%	7,810	7.0%	14,090	3.9%

POVERTY

In 2003, the U.S. Census Bureau reported that the official poverty rate for the United States was 12.5%, up from 12.1% in 2002. Poverty is present when total family income is below a threshold, adjusted based on the Consumer Price Index (CPI), and based on family size, number of children and age of householder. The source of official poverty estimates are the Current Population Survey (CPS) and the Annual Social and Economic Supplement (ASEC).

Montana's official poverty rate was 14.1% in 2000, 13.3% in 2001, 13.5% in 2002, 15.1% in 2003 and 13.6% in 2004. Montana's poverty rate showed a net decrease of 1.5 percentage points between 2000 and 2004. In 1990, Montana's poverty rate was 15.6%, for a 0.5 percentage point decrease over the past thirteen years. Poverty rates by county differ significantly. Higher poverty rates are concentrated along the Hi-line and in the eastern part of the state. Poverty rates by county from the 2000 Census (based on 1999 income) are depicted in the map on the next page.

The total individuals in poverty status and individuals by selected age are in Table I.14 following the map.

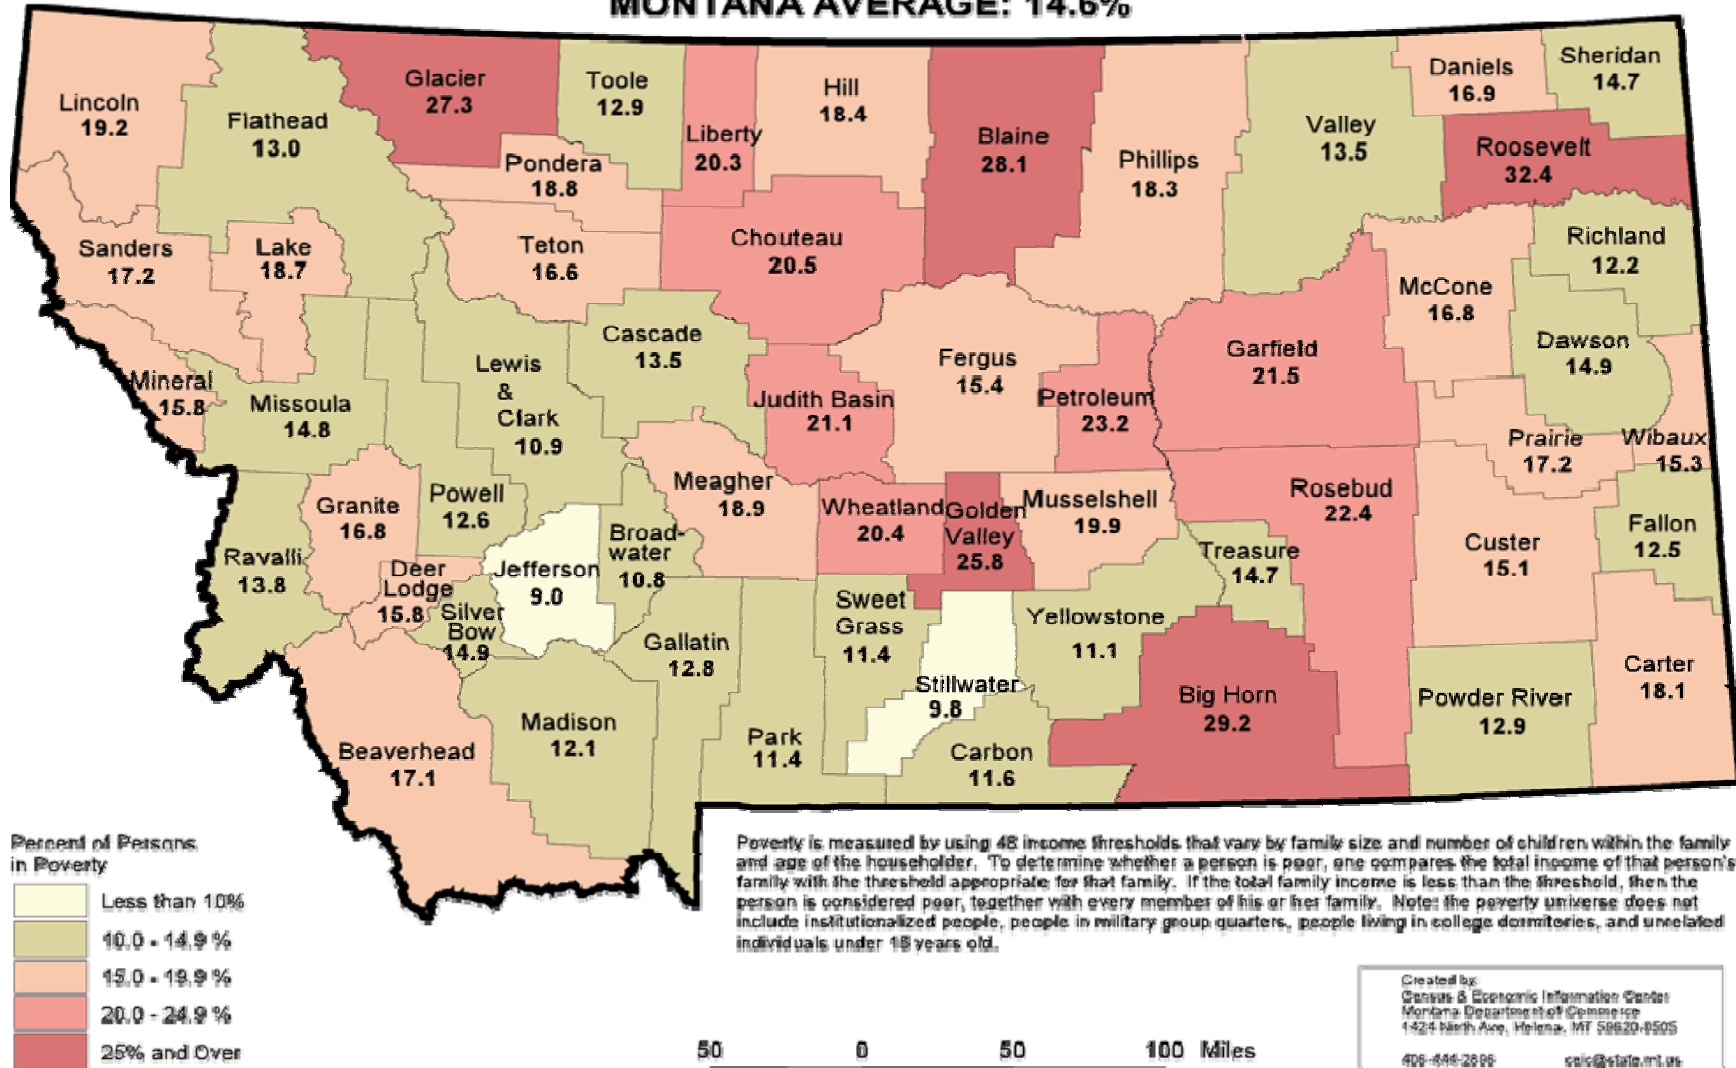

Family Poverty Status

Although Montana's overall poverty rate has decreased since 1990, the poverty rate for Montana's families has not. The total number of families under the poverty level has increased 20.7% from Census 1990 to 2000. 2005 estimates indicate that there are currently 24,863 families under the poverty level in the state. Increases were shown in the married-couple with children, female householder (no husband) with children, and male householder (children and no children combined) categories. As of 2005 estimates, 34% of total families under the poverty level are female householders with children under 18. The detail of family poverty status is shown in Table I.15. (County level estimate data for 2005 is not available.)

SUMMARY

Overall, the Montana economy has become more diversified since 1994, shifting toward the construction, retail trade, and professional service industries and away from mining and farming.

Montana's unemployment rate has dropped 24.5% over the past ten years. Much of the job growth and available jobs continue to be in low paying industries such as services, agriculture, forestry, and fishery and retail trade. The finance, insurance and real estate sector has also shown significant job growth as well as a significant increase in wages.

Although the state's per capita personal income growth has outpaced the national average, it is still less than 75 percent of the national level. Transfer payments have increased 48 percent from 1990 to 2005 while earnings have increased 56 percent during the same period. Unearned income sources continue to grow for Montana's families, and have grown almost twice as fast as wage income. Montana's overall poverty rate dropped from 1990 to 2004 (128,355 persons in Montana were under the poverty level in 2000), and decreased from 15.1% to 13.6% between 2003 and 2004. The number of Montana's families in poverty has increased since 1990; from 19,833 families under the poverty level in 1990 to 25,004 families under the poverty level in 2000. 2005 estimates show a slight decrease with 24,863 (families living below the poverty level).
